

CHURCHWARD-SNELLEN ILLITERATE “E” 6 METRE SIGHT TEST CHART (ALSO KNOWN AS THE ROTATING “E” TEST)

Product ref: TTC6IE

BACKGROUND

The sight testing chart complies with the letter sizing for test chart determining distance visual acuity as specified in British Standard BS.4274.

The letter style has been specially created by Joseph Churchward who is internationally recognised as a designer of quality print and letter styles and fonts.

TECHNICAL

The following benefits have been incorporated into this chart. They are:

1. The letter and layout conforms exactly to the British Standard.
2. The style of the letter has been designed to provide clearer recognition.
3. The inclusion of a 7.5 size line. This is to provide an intermediate size line between 6/9 and 6/6 letters which has proven a very helpful addition.
4. Along the right edge of the chart is a line number for easy referral. This can be cut off if not required.
5. Each chart comes with asset-up kit that includes a 3 metre cord, adhesive coloured tape for sticking to the floor at the correct distance, instructions and Velcro dots for mounting on wall.

MATERIALS USED

The chart is made from flexible non-reflective white plastic sheet and the letters are printed in non-reflective black ink.

LINE NUMBERS

If the numbered lines are not required, they can be easily cut off the chart.

CLEANING

The chart can be washed with domestic detergents. Do not use solvents, methylated spirits or alcohol based chemicals or other commercial or domestic fluids to clean these charts.
